SUMMARY

Senior Software Engineer with 8+ years of experience architecting scalable, high-performance web applications and modular platforms. Specialized in React, Next.js, and TypeScript, with full-stack capability in Node.js to design and integrate robust backend APIs. Currently expanding into AI engineering, building intelligent systems driven by LLMs, RAG frameworks, and autonomous AI agents.

EXPERIENCE

Frontend Lead Engineer

Soft Suave Technologies | Client: Ragworks AI

August 2025 – Present, Bengaluru

- Led and mentored a frontend engineering team of 2 developers, establishing rigorous code review processes and development standards to ensure architectural consistency, minimize technical debt, and launch a scalable SaaS platform from the ground up.
- Reduced feature development time by 30% by building a Turborepo Monorepo for 2 Next.js applications with a shared design system and reusable components to eliminate duplicate code.
- Championed the adoption of Next.js, TypeScript, React.js, and React Query across the engineering team, standardizing frontend architecture patterns and accelerating developer velocity.
- Architected white-labeled UI components using headless shadcn/ui and Tailwind CSS, enabling seamless adoption and cross-platform customization for different clients.
- Enabled offline support by storing chat history in IndexedDB (dexie), ensuring seamless application availability, reliable local data caching, and uninterrupted user sessions during network disruptions.
- Spearheaded the adoption of AI-assisted development tools including Claude and GitHub Copilot across the engineering team, optimizing complex logic implementation and boosting overall development productivity by 50%.

Senior Frontend Engineer

Soft Suave Technologies | Client: Imperial Brands

February 2023 – August 2025, Bengaluru

- Engineered a configuration-based UI and headless component architecture integrated with Contentful CMS to support unique market requirements across different countries, slashing time-to-market for new country launches by 40%.
- Rebuilt the platform's core UI theme in Tailwind CSS, cutting the production CSS payload size by 60% and driving the performance Lighthouse score from 78 to 90.
- Optimized a Next.js App Router architecture leveraging Incremental Static Regeneration (ISR) to deliver instant first-load performance, while continuously integrating robust SEO optimization and strict WCAG AA accessibility standards across all global digital properties.
- Followed a robust automated testing infrastructure by deploying Jest and React Testing Library pipelines, increasing overall code test coverage to 85% and cutting production regressions by 30%.
- Maintained an Atomic design pattern for reusable headless components, deploying the same core logic across two distinct products with entirely different UI themes, which cut localized development cycles by 35%.
- Implemented client-side A/B testing framework integrated with feature flags to run concurrent UI experiments, driving data-backed product variations that increased user conversion rates by 5–10%.

Senior Full Stack Developer

Soft Suave Technologies | Client: Amnet

November 2021 – February 2023, Bengaluru

- Developed end-to-end features using React.js, Node.js/Express, and GraphQL, modernizing the core infrastructure of a book publishing platform and improving overall API data fetching efficiency by 30%.
- Built a custom wrapper around the ProseMirror editor core, delivering a rich, highly tailorable text-editing workspace that elevated content production speeds for authors and editors by 25%.
- Containerized the application ecosystem using Docker to unify the client, backend, and database environments, eliminating local environment inconsistencies and accelerating deployment velocity.

Full Stack Developer

Soft Suave Technologies | Client: Officespace

August 2018 – October 2021

- Migrated legacy codebase into modern React.js and TypeScript (80% focus) to optimize performance and code quality, while providing 20% backend support by maintaining and updating Ruby on Rails services.
 - Implemented table virtualization strategies to efficiently process and load employee directories of over 10,000+ rows, eliminating DOM lag and ensuring smooth scrolling and data rendering performance.
 - Developed an XML-based backend configuration engine to dynamically render customizable UI reports and tables, enabling clients to adjust layout views and data visibility according to their preferences.
 - Integrated LaunchDarkly feature flags to decouple feature releases from code deployments, allowing continuous, non-blocking shipping of unfinished modules without delaying deployment timelines.
-

SKILLS

Frontend & Frameworks: Next.js, React.js, Micro-frontend Architecture, PWA (Progressive Web Apps)

State Management & Data Fetching: React Query, SWR, Redux / Saga, Context API, Zustand, Apollo Client

UI & Styling Frameworks: Tailwind CSS, Material-UI (MUI), Storybook, Ant Design, shadcn/ui, Accessibility (A11y) Compliance

Languages: TypeScript, JavaScript (ES6+), Ruby

Backend & API Development: Node.js, Express.js, Ruby on Rails, GraphQL, RESTful APIs

Testing & Quality Assurance: Jest, React Testing Library, Cypress

Build Tools & Dev Tools: Vite, Webpack, Turborepo, Git, CI/CD Pipelines

AI-Assisted Development Tools: Claude Code, GitHub Copilot, Anti-gravity

EDUCATION

Bachelor of Engineering
Karpagam College of Engineering • 2018
